Polarization observables: spin-1/2 + spin-0 with $F = a\,I + ib\,\hat{n}\cdot\sigma$
(A) Unpolarized $d\sigma/d\Omega$
$|a|^2 + |b|^2$
θ [deg]
(B) Mott-Schwinger $|\pi_{\rm out}|$ (unpolarized in)
$|\pi_{\rm out}|$
θ [deg]
(C) Single-scatter $\nu(\theta)\,\hat{n}\cdot\pi_{\rm in}$
$A_{LR}(\theta)$
$\pi_{\rm in} = \hat{x}$ (in plane)
$\pi_{\rm in} = \hat{y}$ (along $\hat{n}$)
$\pi_{\rm in} = \hat{z}$ (longitudinal)
θ [deg]
(D) Analyzing power $\nu(\theta)$
$\nu(\theta)$
$\nu(60^\circ) = -0.389$
$\nu(60^\circ)^2 = +0.152$
θ [deg]
